

Product Information Sheet

MILDVAC-ARK® Bronchitis Vaccine

Arkansas Type, Live Virus

Product Information

MILDVAC-ARK® is a mild-reacting lyophilized vaccine for the protection of chickens against the Arkansas type of infectious bronchitis (IB). It is approved for spray vaccination of chickens one day of age or older.

MILDVAC-ARK® contains:

- DPI strain (3168) Arkansas type of infectious bronchitis virus.

Product Features:

- Mild reaction. Approved for use in chicks at one day of age.
- Excellent protection against Arkansas type of infectious bronchitis.
- Monovalent vaccine can be tailored to numerous vaccination programs.
- DPI strain (3168) of Arkansas type IB selected for its low reactivity and high immunogenicity.

Indications for Use:

Mildvac-Ark® is indicated for the vaccination of healthy chickens at one day of age or older for protection against infectious bronchitis (Arkansas type).

Dosage and Administration:

The time of administration should be determined by the degree of infectious bronchitis exposure, type of chicken being vaccinated, and the current management procedures.

Mildvac-Ark is approved for use via coarse spray in chickens at one day of age or older.

Vaccination:

The best protection is obtained when the vaccinated chickens have time to develop immunity prior to exposure to infectious bronchitis virus. Good management practices are recommended to reduce the exposure to this virus for at least 3 weeks following vaccination.

Cautions:

1. Refer to the package insert for specific directions.
2. Vaccinate only healthy birds.
3. All susceptible birds on the same premises should be vaccinated at the same time.
4. Do not dilute the vaccine or otherwise stretch the dosage of the vaccine.
5. Use entire contents of the vial when first opened.
6. Do not vaccinate chickens within 21 days of slaughter.

How Supplied

10 x 10,000 dose vials
10 x 25,000 dose vials
